Request Re-Reviews

If you have:

- Submitted a PR
- Received a manual review (comments)
- Updated your PR to reflect those comments

You should request a re-review.

Media-Organizer #47

[Open](#) Haneen-1027 wants to merge 26 commits into `main` from `Media-Organizer`

Conversation 60 Commits 26 Checks 26 Files changed 13 +804 -0

Haneen-1027 commented 4 days ago

Task Checklist:

- All behavior checked in the test cases is described in the task instruction.
- All behavior described in the task instruction is checked in the unit tests.
- My test cases have informative docstrings that describe which behavior they check. It is hard for the agent to cheat on

Use of Drafts

- You should only mark your PR as a draft **if you are still actively working on it**
- Otherwise, a submitted PR that is awaiting review or being iterated on should be marked “Open”

The screenshot shows a GitHub pull request interface. The title of the PR is "Get crypto currency price and save file #88". A green button labeled "Open" is visible. The PR summary states: "wizard872 wants to merge 7 commits into main from get-crypto-currency-price-and-save-file". Below the summary, there are four status indicators: "Conversation 13", "Commits 7", "Checks 26", and "Files changed 8".

Don't Over-index on Difficulty

Don't sacrifice task quality/completeness for sake of aiming for very low accuracy.

- Only need to be below 80% to have a valid task, only under 40% for a hard classification
- More important to make sure that **solution and all test cases are correct and thorough**
- Test cases should **only** cover what is defined in task.yaml

No Trivial Submissions

- We are only looking for tasks that meet at least the “easy” quality bar (<80% accuracy)
- If you submit a task that is rated above that (“trivial”), you should iterate on it to make it more difficult
- No “trivial” tasks will be accepted

Adding Local Model Runs

We will be providing OpenAI and Anthropic keys within the next day or two

- Will allow you to run models locally to test accuracy/task difficulty before submitting
- Should make testing and iteration much easier!
